

Why we need permanent summertime

1 Warmer

Is it easier for you to work in the summer or the winter?

Discuss the question with your partner. Think about:

- Going to work
- Doing your work
- Going home

2 Key words and expressions

Find the words in the article that match the definitions below. The paragraph numbers are given to help you.

1. To express an opinion by choosing between two or more issues, people, etc.
_____ (para 2)
2. To stay in a particular place or position and not leave it. _____ (para 2)
3. Be the same as something. _____ (3 words, para 3)
4. A period when you adapt to a change. _____ (para 4)
5. Doing something unnecessary. _____ (para 4)
6. Choosing. _____ (para 5)
7. Real. _____ (para 6)
8. Awake and aware. _____ (para 7)
9. Things people say that may or may not be true _____ (para 9)
10. A test of something for a period of time. _____ (para 10)

We need permanent summer time to lift our mood

It is difficult to quantify the benefits of lighter afternoons

BY MICHAEL SKAPINKER

- 1 As I leave the Financial Times building after work this week, I walk into daylight. The clocks have changed. The sun-blessed evenings have begun. It is now seven months until that crushing Sunday at the end of October when the clocks go back and we plunge once again into mid-afternoon darkness.
- 2 Except the time-shifting should soon stop. The European Parliament voted last week to put an end to the twice-yearly changing of the clocks. All EU countries, the parliament said, should remain either on summer or winter time all year long.
- 3 The change was meant to start this year, but, in line with the EU's penchant for delay, the parliament said it should now begin in 2021. The vote needs to be approved by EU ministers.
- 4 If the UK is still an EU member, or serving out its transition period, it will have to adopt the change too. But even if it is not, if all its European trading partners have ended clock-changing, it would be needlessly disruptive not to do so as well.
- 5 The move seems popular: 4.6m EU citizens responded to a consultation, with 84 per cent saying they wanted clock-changing to stop. The majority – 56 per cent – said they wanted permanent summer time, with 36 per cent opting for endless winter time and 8 per cent having no view, apart from not having to change the clocks.
- 6 Changing the clocks is a hassle; the one on the oven is many people's most irksome. But the real prize is an extra hour of daylight in winter. Of course, the actual number of daylight hours does not change; it just means that, in winter, what looked like a gloomy 4pm becomes a gloomy 5pm.
- 7 Many claims have been made for an extra hour of daylight. Its champions say that it reduces accidents, because drivers are more alert on dark mornings on their way to work than they are coming home in the dark. Children walking home from school are less likely to be hit by a car if it is still light.
- 8 The extra daylight hour is said to stimulate the retail, leisure and tourist economies. People are more likely to go shopping or out with friends. Many believe that crime goes down because criminals are less brazen when it is light.
- 9 What is the truth of these claims? There has already been an experiment with "continuous summer time": Britain tried it between 1968 and 1971. A government White Paper towards the end of the experiment said that the advantages and disadvantages had been difficult to quantify.
- 10 Opposition to endless summer time was strong during that trial. Farmers, the building industry and many in Scotland, who had to endure dark winter mornings, disliked it. In December 1970, the House of Commons voted overwhelmingly, by 366 votes to 81, to revert to twice-yearly clock changing.
- 11 The difficulty in quantifying the benefits of lighter afternoons continues. A survey of 24 studies into the effect of clock changes on road accidents, published by the BMJ, found some evidence that extending daylight hours reduced road accidents, fatalities and injuries, particularly to pedestrians and cyclists. But, the survey warned, the number of accidents can fall for reasons unrelated to light, such as weather and road conditions.
- 12 The research was too inconsistent to reach definite conclusions. Extra daylight "could possibly have a positive or negative impact on collisions, but may also have no effect," the survey concluded.
- 13 What of the impact on crime? A US study found that lighter afternoons did reduce robbery rates by 7 per cent. But other interventions reduced crime too. Anti-theft technology reduced car theft by 10 per cent. Requiring frequent breathalyser tests for prisoners on probation led to a fall in drunken driving and domestic violence, the study said.
